

Prevent Today, Protect Tomorrow

CHILDHOOD IMMUNIZATIONS

Southeastern Idaho Public Health's Childhood Immunization Program delivers essential preventive care to children who might otherwise face barriers to vaccination. Focused on protecting against vaccine-preventable diseases, the program ensures access to timely immunizations, education, and follow-up services for the families. By promoting early protection, the program plays a key role in safeguarding children's health and supporting overall community well-being.

THE PROBLEM

Idaho's childhood vaccination rates are among the nation's lowest.

Idaho's childhood vaccination rate for kindergartners declined to 74.8% for the 2024-25 school year, down from 76% the previous year.
